

Super Sales Dashboard

A Power BI project that turns sales performance into clear management actions

Mrutyunjay Das

Data Analytics Project Showcase

One dashboard connects performance to action

Business question

Where is revenue coming from—and where should management focus next?

The report combines financial, customer, product, logistics, geographic, and time-based views in one interactive experience.

Ship days

West, East, and Consumer concentrate demand

Regional contribution

Customer segment

62% of sales comes from West + East; Consumer alone contributes nearly half.

Office Supplies leads; Phones top the displayed sub-categories

Category sales (M)

Top displayed sub-categories (M)

Portfolio implication

Use Office Supplies as the volume anchor, then cross-sell Technology products to increase value per customer.

Standard shipping and COD dominate the operating mix

Sales by ship mode

Payment mode share

Opportunity

Review Standard Class cost and encourage prepaid digital payments where practical.

Performance strengthens late in the year

The dashboard's monthly views show sales and profit reaching their strongest levels toward year-end, with December especially prominent.

Management response

- Build inventory before the late-year rise
- Align campaigns with peak months
- Investigate the recurring mid-year softness
- Validate whether seasonality repeats across regions

Trend reconstructed directionally from the visible dashboard lines

The dashboard turns seven findings into a focused action plan

01		Protect core regions	Maintain West and East momentum while diagnosing South.
02		Double down on Consumer	Target the segment responsible for 48% of sales.
03		Plan for year-end demand	Prepare inventory and campaigns before the late-year rise.
04		Optimize mix	Cross-sell Technology and review Standard Class economics.
05		Improve payment quality	Encourage prepaid digital methods where suitable.

Portfolio-ready analysis: clear metrics, evidence-based insights, and business recommendations.
